ICTs and Education in Developing Countries: Do Policies Matter?

Melike Findikoglu¹, Mauricio Vasquez¹

1. Information and Decision Sciences, University of Illinois at Chicago, Chicago, IL, United States.

This paper analyzes the relationship between information and communication technologies (ICTs) and development in Puerto Rico focusing on education. While other aspects of development are just as important, the lack of progress when it comes to education turn this issue into a big threat to improve other aspects of development, such as economic and social areas. Authors discuss the case of Puerto Rico with the thought that this discussion has relevance in the way ICTs impact areas like the Caribbean and Latin America.
