Information Systems: A Business or Computer Science Discipline?

Moderator: George S. Nezlek, Loyola University Chicago.

Throughout their history, IS programs have called many places home. In contrast to other academic disciplines, contemporary Information Systems programs may be found in a variety of places, for example:

- within business schools as separate departments
- within business schools as parts of larger departments
- within computer science departments

Is this diversity the result of chance, or are there compelling reasons to locate an IS program in a particular environment? Each of these alternatives offers a set of advantages and potential limitations. This panel will consider the pros and cons of answers to the question: "where does an IS program belong?"

Panelists:

Sasa Dekleva, DePaul University, Director - MIS program - School of Accountancy.

Howard Kanter, DePaul University, School of Accountancy.

Thomas Muscarello, DePaul University School of Computer Science, Telecommunications, & Information Systems

Enrique Venta, Chairman, Information Systems & Operations Management, School of Business Administration, Loyola University Chicago.
