EDITORIAL

CAIS: YEAR TWO REPORT

Paul Gray
Editor, CAIS

cais@cgu.edu

ABSTRACT

This article reports on the activities of CAIS during its first two years and some of the new features that are coming in Year 3. It also announces the availability for CAIS of an index of articles by subject type and a search capability based on keywords. The article contains tables listing of all articles by subject type for the period 1 January 1999 to December 31, 2000

Keywords: CAIS, Annual Report, Subject Index, New Initiatives

I. INTRODUCTION

This report summarizes what the Communications of the Association for Information Systems (CAIS) accomplished in its first two years of publication. The report begins with a description of the people involved – the authors and editors who make the journal possible. It then discusses the new search capabilities available and concludes with the new initiatives being undertaken.

The statistics for the first two years are:

Total Number of Articles Published	78
Number of Different Authors	135

II. AUTHORS AND EDITORS

AUTHORS

We are particularly pleased that 135 different authors have contributed to the journal in its first two years. The authors include:

Communications of AIS Volume 4, Article 16
CAIS: Two Year Report by Paul Gray

- senior and junior faculty
- people who teach undergraduates, masters, and doctoral students
- those who do research and those who do not
- faculty from large institutions and small institutions
- contributors from 11 countries, including all three regions of AIS

It was the original concept of the journal to attract a broad range of contributors from throughout the world and bring their papers to the wide audience that is the Association for Information Systems. We are pleased that we were able to accomplish this goal.

EDITORS

CAIS maintains 3 levels of editors. The top level, referred to as The Senior Editorial Board, govern both CAIS and our sister journal, JAIS. It is responsible for policy decisions. It consists of Henry C. Lucas, University of Maryland, College Park who is Editor in Chief of all AIS publications, Blake Ives, Louisiana State University, President-Elect of AIS, E. A. (Ted) Stohr, New York University, Reagan Ramsower, Baylor University who is the Publisher of CAIS and JAIS and is editor of IS World News, Phillip Ein-Dor, Editor of JAIS, and Paul Gray, Editor of CAIS.

The second level is an advisory board of senior IS people (Gordon Davis, Ken Kraemer, Richard Mason, Jay Nunamaker, Henk Sol, and Ralph Sprague). Their role is to review the journal's performance and advise on what improvements can be made.

The Editorial Board consists of 28 members whose role is to make accept/reject recommendations on individual manuscripts where "lite" review is requested and to supervise the refereeing of manuscripts where authors request peer review. They are also tasked with soliciting manuscripts where they know interesting work being done. The membership of the Editorial Board was chosen so that it includes faculty at large schools and at small schools; all three regions

of AIS; senior and junior people; men and women; and most areas of work in information systems. Their profile matches our contributors.

The Editors meet twice a year, once at ICIS and once at the American AIS meeting (AM AIS) to review the past six months and to suggest initiatives. For example, the addition of Letters to the Editor is a direct result of one of these meetings.

The Editorial Board was remarkably constant during our first two years. Only one member of the Board asked to be relieved of her duties and that was a case of her promotion to senior administration. It is our intent to begin a process of rotating Board membership so that more individuals can be involved in CAIS. We anticipate that we will make 3-year appointments, which can be renewed.

The contribution of each member of the Board is an important service to CAIS and is greatly appreciated by the Editor.

III. RETRIEVING ARTICLES BY SUBJECT AND KEYWORDS

CAIS is pleased to announce that it created two major indices to allow readers to find articles more quickly:

1. A search capability that finds articles by keywords.
2. A breakdown of articles by type

SEARCH

The search capability can be accessed by selecting "Search" on list of options on the right side of the Table of Contents page:

<http://cais.isworld.org/contents.asp>

The request for search produces the following screen.

Article Search

Search:

☒ Full Text ☐ Keyword

SUBJECT TYPES

As of the end of the second year, the articles are divided into the eight subject types shown in Table 1.

Table 1. CAIS Subjects

SUBJECT TYPE	NUMBER OF ARTICLES
CASES	7
EDITORIAL	4
EDUCATION FOR IS	8
ELECTRONIC COMMERCE	7
KNOWLEDGE MANAGEMENT	5
PROFESSIONAL	13
RESEARCH	26
TUTORIALS	16

The total number of publications is 78. However, the numbers in the table add up to more than 78 since a few articles (e.g., cases in electronic commerce) fall into two categories.

Table 2 through 9 list the articles published by type. As shown in Table 1 above, the types include both specific subject areas (e.g., electronic commerce) and generic categories (e.g., cases). CAIS is particularly proud of the fact that its output includes many articles important to the profession that fall outside the areas published by most other IS journals. They are now accessible to the broad audience of the journal. In particular, CAIS publishes:

- Cases
- Tutorials
- Articles on undergraduate and graduate education in IS
- Articles describing research methodologies
- Opinions on the state of IS

CAIS intends to continue to publish in these areas and invites contributions from our readers. In particular, cases and tutorials help in teaching, as do articles on

new concepts in education. We also believe it important that faculty in IS be involved in thinking through the state of IS. Many of the professional articles that we publish are controversial. CAIS offers a platform where IS faculty can take positions, be they popular or not.

IV. ANTICIPATED IMPROVEMENTS

A number of initiatives are currently underway. They include:

1. *Letters*. As mentioned in Section II, a Letters to the Editor category was added. I urge readers to submit letters in response to CAIS articles. Letters are published following the article so that future readers can see not only the article but the response to it as well. The Letters also serve as feedback that helps improve the quality of the Communications.
2. *Cases*. In the past two years, The Communications published seven case studies that can be used for teaching. We plan to increase the number of cases published substantially because of their usefulness to our readers. Remember that cases can be downloaded and distributed for educational purposes by subscribers to CAIS without royalty costs. We anticipate adding a number of people to the Editorial Board with specific responsibility for cases.
3. *Focus "Issues"*. Because of its electronic nature, CAIS publishes articles as soon as they are ready for publication. CAIS does not need to combine articles into 'issues' that are mailed. Yet we would like to publish related articles on a given subject, much like a Focus Issue of a print journal. We have had one such issue, edited by Chris Holland of the University of Manchester. That issue, which dealt with views of legacy systems, came from a meeting in the UK and consisted of eight articles. All the articles in a Focus Issue do not need to appear simultaneously. They can be tied together with a common title. Subscribers are invited to correspond with the editor if they have concepts for a Focus Issue and would serve as guest editors.

4. *Technology.* When the AIS Council established its requirements for its publications, it specified that they should be electronic so that, as an information systems society, they would lead the way in our own technology. Although many CAIS articles would fit easily into conventional print journals, we have published a number that would not. These articles make use of the properties of the Web (including hyperlinks) and the ability to present material in color and, in one case, in multiple dimensions. We seek more articles that exploit the medium including those that use the video and audio capabilities of the web.

V. CONCLUSIONS

The editor and the members of the editorial board appreciate the support given the journal by our readers. We hope that in the year ahead we can continue to serve the interests of the information systems community.
